

### Assignment 5: OOP

1. Create a class called Human with these attributes: name, age, weight. It has the following functions:
  - `eat(foodWeight: Int)` :Prints "I am eating {foodWeight} kgs of food" and increments the human's weight by the weight of the food eaten (3 points)
  - `speaking(speech: String)` :Prints the string passed to it (2 points)
  - `birthday()` :Increments the human's age by 1 (2 points)

Create an instance of this human class and invoke all its functions

2. Create a data class User with these fields: firstName, lastName, email, phoneNumber, password. Create an instance of User and print out any 2 attributes (3 points)
